

ManyChat CTA Workflow — Client Setup Guide

This is the full process, end to end, for turning your short-form videos into a comment-to-DM machine that pushes viewers into your long-form YouTube content.

You'll be doing this with me (Jet) on the content side, and ManyChat on the automation side. Here's how the whole loop works.

Overview of the loop

1. You send me your YouTube channel link (one time only).
2. For each new short-form video, I write the script and pick the matching long-form YouTube video from your channel.
3. I send you back: a **CTA line** to put in the video, a **keyword** for viewers to comment, and a **ManyChat setup block** with all the DM copy ready to paste.
4. You set up ManyChat for that specific post (~5 minutes).
5. You post the video.
6. Viewers comment the keyword → ManyChat auto-DMs them the YouTube link → they watch your long-form.

Step 1 — Send me your YouTube channel link (one time)

Just paste me the URL of your YouTube channel. Any of these formats work:

- `youtube.com/@yourhandle`
- `youtube.com/channel/UCxxxxxx`
- `youtube.com/c/yourname`

I'll register your channel on my end and pull your videos + transcripts so I can match the right long-form video to each short-form script we make.

You only do this once.

Step 2 — Send me your short-form script (or let me write it)

Either: - Paste me the script you've already written, OR - Tell me the topic and I'll write it.

I'll then pick the long-form YouTube video on your channel that best matches the topic of the short-form. This is what the keyword in the CTA will lead viewers to.

Step 3 — What I'll send back

For each video, you'll get a block that looks like this:

Matched long-form: [Video title] – [YouTube URL]

Suggested keyword: THINK

CTA options:

1. [option 1]
2. [option 2]
3. [option 3]

→ pick one and tell me

— MANYCHAT SETUP BLOCK —

Client: [Your Name]

Platform: instagram

🔑 Keyword: THINK

💬 Public comment reply: "Sent! Check your DMs 🙄"

— DM STAGE 1 – Opening DM —

Message: Hey! Saw you commented THINK 🙌 Want me to send the video?

Button label: Yes, send it

— DM STAGE 2 – Follow-gate DM —

Message: One small thing – make sure you're following so this works 🙏

Button label: I'm following

— DM STAGE 3 – Link DM —

Message: Here it is – full breakdown 📌

Link card: Watch on YouTube

URL: <https://youtube.com/watch?v=...>

You'll plug those exact values into ManyChat in the steps below.

Step 4 — One-time ManyChat + Instagram setup

Do this once. After this, every new video only takes ~5 minutes.

1. Go to **manychat.com** and sign up (the free plan is enough to start).
2. Switch your Instagram to a **Business** or **Creator** account:
3. Open Instagram → **Settings** → **Account type and tools** → **Switch to professional account**.
4. Link your Instagram to a **Facebook Page** (Meta requires this for ManyChat to work):
5. Instagram → **Settings** → **Accounts Center** → **Connect a Facebook account**.
6. If you don't have a Facebook Page yet, create a basic one — it doesn't need to be active.
7. In ManyChat → **Settings** → **Channels** → **Instagram** → click **Connect** and approve.

That's it for the one-time stuff.

Step 5 — Per-video ManyChat setup (do this BEFORE posting)

Time: ~5 minutes per video.

5a. Create a new automation

- ManyChat dashboard → **Automation** → **+ New Automation**.
- Pick **Instagram** → **Comments** → **Specific Post**.
- If you haven't published yet, choose **Any Post** for now — you'll switch it to the specific post in Step 5f.

5b. Set the keyword trigger

- **Keyword:** paste the keyword I sent you (e.g. `THINK`).
- **Match type:** **Contains**.
- Case-insensitive should be on by default.

5c. Public comment reply

- Enable "Reply to comment publicly".
- Paste the **public comment reply** text from the block (e.g. "Sent! Check your DMs 🙄").

5d. Build the DM flow (3 messages in order)

Message 1 — Opening DM - Text: paste the **Opening DM** message. - Add a **button** → label = the Stage 1 button text → action = "Go to next message".

Message 2 — Follow-gate DM - Text: paste the **Follow-gate DM** message. - Add a **button** → label = the Stage 2 button text → action = "Go to next message".

Message 3 — Link DM - Text: paste the **Link DM** message. - Add a **link card / URL button**: - Label = the **Link card** text (e.g. "Watch on YouTube") - URL = the YouTube **URL** from the block.

5e. Turn the automation ON

- Top right → toggle **Active**.

5f. After you post the video

- Copy the URL of the post you just published.
- Go back into the automation → change the trigger from "Any Post" to **that specific post**.
- Save.

Step 6 — Test it before relying on it

1. From a **second Instagram account** (not your own), comment the keyword on the live post.
 2. Within ~30 seconds you should see:
 3. The public reply appear under the comment.
 4. A DM arrive in the second account, walking through all 3 stages.
 5. If nothing happens, check:
 6. The automation is **Active**.
 7. The **post URL** is set correctly.
 8. Your IG is **Business/Creator** and connected to ManyChat.
-

Step 7 — Post the video

- In your caption (or as a pinned comment), include the **CTA line** I sent you. That's what tells viewers what keyword to comment.
 - Don't change the keyword wording — it has to match exactly what's in ManyChat for the trigger to fire.
-

Reusing keywords

Each keyword can only point to **one** YouTube video at a time per IG account. If you want to reuse a keyword later for a different video, either: - Pause the old automation first, or - Use a fresh keyword (I'll always send you one that hasn't been used yet).

That's the whole loop. The first time takes a bit of setup, but every video after that is just: receive the block → 5 minutes in ManyChat → post.
